Endoscopic Retrograde Cholangiopancreatography Procedure (ERCP)

Thank you for choosing the Georgia Health Sciences Medical Center Endoscopy (ENDO) for the health care needs.

- Please do not eat or drink after midnight the night before your procedure.
- You will need lab work (CBC and PT/PTT) drawn within 30 days of the procedure. If this has not been done, contact the clinic at 706-721-1790 to get the appropriate paper work to take to the lab.
- Medications to stop 1 week before the procedure: aspirin, aspirin products, Advil, Motrin, Aleve, NSAIDS, arthritis medications and blood thinners.

If you are diabetic, do not take diabetic tablets or insulin the morning of the test. Bring your diabetic medications, syringes, and glucometer with you when you come to the hospital for your procedure.

Continue to take all other medications as prescribed. You may take your medicine the day of the test with just enough water to swallow.
